**Re: GoConnect partners with ES&S to launch IPTV Weather Channel**

Directors of GoConnect Ltd (“GCN”) are pleased to advise that the company’s wholly owned subsidiary, GoConnect Australia Pty Ltd (“GoConnect”), has entered into a licence agreement with Environmental Systems & Services Pty Ltd (“ES&S”) to launch an IPTV Weather Channel.

ES&S is the largest Australian company specialising in meteorological, oceanographic, seismic, environmental and geotechnical products and services and has been operating for more than 30 years. ES&S has offices in Melbourne, Brisbane and Beijing.

ES&S is the exclusive authorised distributor of weather data from Weather Services International (WSI), a member of The Weather Channel Companies, the largest private weather forecasting operation in the US. WSI has become renowned for their ability to successfully combine the power of unparalleled industry knowledge, the experience of an unprecedented number of meteorologists and four state-of-the-art Global Forecast Centers. WSI’s internationally recognized experts in tropical weather, climatology, and severe weather apply their skills to cutting-edge technologies designed to constantly improve their abilities to forecast, detect and visualize the disruptive weather events that affect the safety and property of their clients and their customers.

The IPTV Weather Channel will provide up-to-the-minute weather observations and the latest forecasts tailored to your specific location. This channel will firstly be made available to the recently announced Metro Netbay Free WiFi Network (“the Network”) providing the latest weather forecast to Melbourne train commuters who can search for weather forecast information targeted to specific locations within Melbourne via their

Internet connected mobile devices while on the Network. This service will eventually be extended to all IPTV platforms employed by GoConnect and will be available as a global weather forecasting service.

Bob Wright, CEO of ES&S says, “This partnership between GoConnect and ES&S opens up new opportunities to expand access to the latest weather for people on the move through the exciting developments in WiFi delivery onto smartphones and tablets.”

GCN’s Executive Chairman Richard Li says, “The launch of the IPTV Weather Channel firstly to Metro Netbay free WiFi network will provide an essential utility service to Melbourne train commuters, particularly with the variability of Melbourne’s weather.

The IPTV Weather Channel is an online tool to search for weather forecast information for specific locations. Melbourne train commuters will be the first to benefit from this unique and refreshing approach to checking weather forecast. Based on the popularity of similar coverage in the US, we expect the unique features of this service to lead to a significant and rapid uptake by local users.”
